Report from the VP

Projects

While forming new customer relationships in Puerto Rico, we were treated to an area favorite. Enjoy!

Coco Mojito

- 12 mint leaves
- 1/2 ounce fresh lime juice
- 2 ounces coconut rum
- 1/2 ounce Simple Syrup
- 1 ounce Coco Lopez
- Ice
- 1 to 2 ounces chilled club soda

In a cocktail shaker, muddle the mint with the lime juice. Add the rum, Simple Syrup, Coco Lopez and ice and shake vigorously. Strain into an ice-filled highball glass and top with the club soda.

Shawn Cotter, VP Operations

As I sit here flying at 37,000 feet over multiple projects in action. I am concerned daily with the progress and safety of each individual on every job, working with me to make all projects successful.

Success is measured by me, with safe project completions and happy customers. Working hard towards the first will bring the second.

We have experienced great growth in sales and new customer familiarity with S.T. Cotter. As Vice President of Operations, it is my responsibility not only to properly submit

proposals, but to make sure all sites and crews are properly prepared for each project and its challenges. All while dealing with emergent outages and supporting the sales group on technical issues.

Thank you to the constant, reliable teams in the field making it happen.

Business is strong and growth has been steady, life is good.

Projects... Alyeska Pipeline Service Company

Turbine Tidbit:
An airline operated by the Tweto family, ERA Alaska, was our mode of transport. Tune into the Discovery channel to watch the reality series "Flying Wild Alaska"

S.T. Cotter was awarded a 3 year maintenance contract in Valdez, Alaska. We will supply the manpower and technical supervision to provide a major turbine and generator overhaul, as well as other specifics within the job scope.

The project is forging ahead, but the city of Valdez has had some unexpected circumstances due to inclement weather. The only accessible road from Valdez to Anchorage, has suffered avalanches and an ice break creating up to 50 feet of water, snow and ice cutting off any motor vehicle travel in and out (pictured on right). Sources report it could take up to a week before the road is cleared.
